<<<Important safety instructions>>>}

⚠️**Warning**
Improper handling of the sensor in non-compliance to any of the following warning precautions or instructions given on a WARNING label can result in death, serious injury, fire, electric shock, and/or sensor failure.

---

⚠️**Warning Precautions**

⚠️ **Strictly Prohibited !**
- □ Never use the sensor as electric cable.

⚠️ **Confirm !**
- □ The sensor length must not exceed 100 m per circuit.
- □ Handle the sensor carefully; it will not work if soiled or damaged.
- □ Take precautions to ensure the sensor does not become wet.
- □ Before use, be sure to read the precautions on the rear of the sensor case.

⚠️ **Caution on Installation !**
- □ Do not install the sensor directly on any surface where dew can form.
- □ Attach the sensor as tightly as possible to the mounting surface. Any unavoidable gap such as on an uneven floor or the like horizontal surface must not exceed 2 mm, and on a pillar, beam or the like vertical surface the gap must not exceed 1 mm.
- □ To minimize the influence of external electromagnetic induction, the sensor comprises two electrodes twisted in a braid form. However, avoid installing the sensor over a long distance in parallel with a power cable or other electromagnetic induction sources.
- □ Where the sensor intersects a power cable of 300 V or higher service voltage, surround the sensor completely with an insulating protective barrier, such as plastic molding.
- □ Install the sensor so that it can be easily replaced. After detection of water leakage, the sensor is reset when the water has evaporated. However, if the sensor absorbs water that contains conductive or water-repellent material, it possibly cannot be reset and needs to be replaced.
- □ To prevent electrical corrosion of the sensor, be sure to connect it to an alternate-current water leakage detector.
- □ Do not allow wax or other oil-based material on the sensor; water is repelled from the surface and may not be detected.

1. Scope of Application

The specification document is applicable for the water leakage position detection sensor (AD-LS sensor). It is developed to detect the water leakage position rapidly.

2. Construction

Fig. 1 and Fig. 2 show the construction of the AD-LS sensor. 
- Electrode 1 (red): In the 0.33mm² strand of tinned annealed copper wire woven by polyethylene
- Electrode 2 (blue): In the 0.5mm² strand of tinned annealed copper wire insulated by FEP
- Electrode 3 (white): There is polyethylene on the resistance wire
- Outer sheathing: Polyester

### 3. Specifications

Table 1 shows the specifications of AD-LS sensor.

<tbody>
<tr>
<td>Resistance between electrodes (AC)</td>
<td>10 MΩ min. per 100m between electrodes (measuring ambient temperature: 24°C, humidity: 60%RH)</td>
</tr>
<tr>
<td>Detecting characteristic</td>
<td>When the amount of water (tap water) is 3.0ml or below, the electric resistance between electrodes is 5kΩ (AC) or below&lt;br&gt;・ Water dropping amount: directly drop to the sensor (0.05ml/s)&lt;br&gt;・ Measuring ambient temperature: 24°C, humidity: 60%RH&lt;br&gt;・ Conductivity water temperature: 24°C, 200μS/cm [5.0 kΩ·cm]&lt;br&gt;・ Testing equipment: Water leakage detector AD-AS-1LM manufactured by our company.&lt;br&gt;Detecting precision&lt;br&gt;Sensor connection length: 1<del>100m : ±1m 101</del>250m : Sensor applied length: ± 1%&lt;br&gt;※ The interconnection length for the sensor is within 250m&lt;br&gt;※ The resistance between electrodes and the amount of water during the sensor operation are dependent on the laying surface status, environment and water quality for the sensor.</td>
</tr>
<tr>
<td>Humidity resistance</td>
<td>In the high humid condition, the resistance between electrodes (Electrode 1 –Electrode 2) is 600kΩ or above /100m (measuring ambient temperature: 60°C, humidity: 95%RH) provided that there is no dew condensation.</td>
</tr>
<tr>
<td>Resetting characteristic</td>
<td>After the water leakage detection, the sensor is reset by natural drying or moisture removal.&lt;br&gt;However, if there are conductive or water-repellent substances in the leaking water, the sensor cannot be reused.</td>
</tr>
<tr>
<td>Heat resistance</td>
<td>60°C max. for continuous operation (heat-resistant temperature: 80°C)</td>
</tr>
<tr>
<td>Weight</td>
<td>12.8±1.0 g/m</td>
